

Connection Impact Assessment (CIA) Application

DER Team | DER@ntpower.ca |

▶ ABOUT THIS FORM

This Connection Impact Assessment (CIA) application is to be completed by any proponent interested in connecting a Distributed Energy Resources (DER) with a project size over 10 kilowatts (kW) to NT Power. This includes DER applying for a new CIA or for revision(s) to their original CIA. This form expresses an intent to enter into an agreement between NT Power and the customer (or host customer* for load displacement projects) for completion of a CIA associated with connecting a DER to the NT Power distribution grid. The CIA Application shall be part of the required servicing (electrical installation, maintenance, and operating) agreements between NT Power and the proponent. Through this process, NT Power will be the proponent's contact with the transmission system provider (e.g. Hydro One Networks Inc.) and, if necessary, the provincial market operator, namely, the Independent Electricity System Operator (IESO).

*For Load Displacement projects, the term "host customer" refers to the owner of the load facility. The term "DER owner" refers to the owner of the DER facility.

TECHNICAL REQUIREMENTS

- ▶ For technical requirements of NT Power's DER projects, refer to the Hydro One's "Distributed Generation Technical Interconnection Requirements", available at:
<https://www.hydroone.com/businessservices/generators/Documents/Distributed%20Generation%20Technical%20Interconnection%20Requirements.pdf>

▶ SUBMISSION INSTRUCTIONS

Please return the completed form, fees and other required documents by mail or E-mail to:

NT Power
590 Steven Court
Newmarket Ontario
L3Y 6Z2
Attn: DER Team

▶ By E-mail: DER@ntpower.ca

- An engineering stamp and all red box fields (on electronic version of form) are mandatory. Incomplete applications may be returned by NT Power and will result in delays in processing your application. Click the "Validate Form" button on the top right of this page to ensure all required information is filled. If any of the required fields are not applicable to your project, type "N/A" in any required text field or "0" in any required numerical field
- NT Power specific requirements and notes are found in Sections S and T, respectively
- Applicants are cautioned NOT to incur major expenses until NT Power approves to connect the proposed DER facility.
- All technical submissions (CIA Application, Single Line Diagrams, etc.) must be signed, dated and sealed by a licensed Ontario Professional Engineer (P.Eng.).
- The proponent will pay for the CIA according to the NT Power's CIA Fee Schedule.

- For Load Displacement or Energy Storage facility connections, the assessment performed by NT Power is referred to as a Detailed Technical Connection Assessment (DTCA). For such facilities, the term "CIA" as it appears throughout this Connection Impact Assessment (CIA) Application shall be interpreted to mean "DTCA".
- The siting restrictions in O. Reg. 274/18 which were administered by electricity distributors such as NT Power have been replaced by amendments to the Planning Act (Ontario) that puts siting and planning requirements for renewable DER facilities under municipal oversight. It is recommended that you discuss municipal permitting and approvals requirements with the planning department in the municipality where your DER project is located before you proceed.
- For micro-embedded projects (10 kW or less), please fill out NT Power's "Micro-Generation Connection Application (Form C)".

▶ SECTION A: APPLICATION INFORMATION

Engineering Stamp	Application Type <i>choose one</i>	Date <i>mm/dd/yyyy</i>
<input type="text"/>	<input type="text"/>	<input type="text"/>
	Program Type/Purpose <i>choose one</i>	Program Type (additional details)
	<input type="text"/>	<input type="text"/>
	Project Name	
	<input type="text"/>	<input type="text"/>
	IESO Contract Number <i>F-XXXXXX-XXX-XXX-XXX</i>	IESO Reference Number <i>FIT-XXXXXXX</i>
	<input type="text"/>	<input type="text"/>

Ontario Corporate Number or Business Identification Number	Proposed In Service Date <i>mm/dd/yyyy</i>
<input type="text"/>	<input type="text"/>

If this project is a subdivision project, please complete the following fields:

Subdivision Project Name	Number of Lots
<input type="text"/>	<input type="text"/>

For certain application type selections, please complete the required fields:

Original CIA Project ID # *XX,XXX*

Revised Fields *list the fields that have changed from your previous application*

▶ SECTION B: PROJECT LOCATION

Address

City / Town / Township	Postal Code
<input type="text"/>	<input type="text"/>
Lot Number(s)	Concession Number(s)
<input type="text"/>	<input type="text"/>

▶ SECTION C: CONTACT INFORMATION

CIA will be issued in the name of the host customer (load facility owner). All agreements (including CCA and DCA) are only made between NT Power and the host customer. This section is strictly to gather contact information of some of the key contacts that are involved with the project.

Who is the single point of contact for this project?

Host Customer DER Owner (if different from host customer) Consultant

Please enter the following information about the **host customer** (load facility owner)

Contact Person

Company's Legal Name

Mailing Address *including postal code, P.O. Boxes and Rural Routes will not be accepted*

Work Telephone

Cell Phone

Fax Number

Email Address

Please enter the following information about the **DER owner** (if different from host customer)

Contact Person

Company's Legal Name

Mailing Address *including postal code, P.O. Boxes and Rural Routes will not be accepted*

Work Telephone

Cell Phone

Fax Number

Email Address

Please enter the following information about the **consultant**

Contact Person

Company's Legal Name

Mailing Address *including postal code, P.O. Boxes and Rural Routes will not be accepted*

Work Telephone

Cell Phone

Fax Number

Email Address

▶ SECTION D: CUSTOMER STATUS

Is there an existing NT Power account at the project location?

Yes No

Is the account holder aware of this application?

Yes No

Does your account fall within a residential-rate classification?

Yes No Do not Know

Existing Account Number

Account Holder Name

Does the account holder have an HST registration number?

Yes No

HST Number

▶ SECTION E: EXISTING DER

Are there existing DER at the point of common coupling (PCC)?

Yes No

Existing Project Number

Existing Project Size (kW)

Program Type For Existing DER *choose one*

DER type: Synchronous Induction Inverter based Other

For synchronous units	For induction units	For inverter based units
Min. power limit for stable operation <i>kW</i> <input type="text"/>	Direct axis sub-transient reactance, X''_d <i>pu</i> <input type="text"/>	Inverter rating <i>kVA</i> <input type="text"/>
Direct axis sub-transient reactance, X''_d <i>pu</i> <input type="text"/>	Direct axis transient reactance, X'_d <i>pu</i> <input type="text"/>	Maximum continuous power output <i>kW</i> <input type="text"/>
Direct axis transient reactance, X'_d <i>pu</i> <input type="text"/>	Total PF correction installed <i>kVAR</i> <input type="text"/>	
Direct axis synchronous reactance, X_d <i>pu</i> <input type="text"/>		
Zero sequence reactance, X_0 <i>pu</i> <input type="text"/>		

▶ SECTION F: PROJECT INFORMATION

Station Name *(optional to leave blank for behind the meter projects)*

Fuel/Energy Type *select all that apply*

Feeder *(optional to leave blank for behind the meter projects)*

Feeder Voltage (kV) *(optional to leave blank for behind the meter projects)*

Project Size (kW) *total maximum output capacity*

Equipment Capacity (kVA) *total equipment nameplate rating*

Type of Connection

Single Phase

Three Phase

If this is a solar project, please answer the following questions:

Mounting Type *select one*

If this is a water project, please answer the following questions:

Is your generation facility located on provincial Crown or federally-regulated lands?

Yes

No

Is water your primary energy source?

Yes

No

▶ SECTION G: STATION SERVICE LOAD INFORMATION

The host customer's station service load details

If there is an existing account at the project location, populating the fields in Section G is required for NT Power. Ensure selection below matches with this note.

Maximum Demand of Station Service Load of DER *kW*

Average Monthly Consumption *kWh*

▶ SECTION H: CONNECTION INFORMATION

On a cut-out from the NT Power DOM (Distribution Operating Map) provide the location of the generation facility with proposed line routings for connection to NT Power's distribution system. It should identify the Point of Expansion (POE), the Point of Common Coupling (PCC), the location of the generation facility, and (if applicable) the route of the new line between the generation facility and the POE (ie. on private property or public road/right-of-way). This is not required for existing load customers that are connecting a load displacement generation, net metering generation or energy storage system behind their existing metered connection point. Please see "Appendix A" for a visual representation of POE and PCC.

DOM Drawing/Sketch Number

DOM Revision Number

Please provide an SLD of the Generator's facilities, including the PCC, transformer and connecting station, feeder, and supply voltage.

SLD Drawing/Sketch Number

SLD Revision Number

POE Latitude *degree decimalformat*

POE Longitude *degree decimalformat*

PCC Latitude *degree decimalformat*

PCC Longitude *degree decimalformat*

Generation Facility Latitude *degree decimal format*

Generation Facility Longitude *degree decimal format*

Length of Line from POE to PCC *km*

Length of Line from PCC to Generation Facility *km*

Important: The line between the PCC and the Generation Facility must NOT be shared with any other DER owner (refer to Appendix A).

Conductor Type/Size *for the line between the PCC and the Generation Facility*

Generator Fault Contribution *with fault location at the PCC*

IMPORTANT NOTES:

If this project requires line expansion work between the POE and PCC, NT Power will provide a cost estimate to construct any line located on public road right-of-way. The cost estimate will include a breakdown of uncontestable work (i.e. overbuild to existing line) that can only be performed by NT Power, as well as contestable work (i.e. new construction/green-field) that may be performed by the Generator, their contractor or NT Power. The design of uncontestable and contestable work shall conform to NT Power specifications).

For Generator-owned line, the Generator may apply to construct the line on existing NT Power-owned poles. This is known as an application for Joint Use (JU) of poles. If the application is accepted, NT Power will provide the Generator with information on initial connection costs, annual pole-space rental and emergency service (ES) fees, and required JU & ES Agreements.

▶ SECTION I: ENERGY STORAGE OR UPS

Please complete the following section if your project includes energy storage.

Number of Units

Inverter Unit Size *enter zero if inverter is shared with generation unit(s)*

Energy Storage Unit Size *kWh*

Total Energy Storage Size *kWh*

Energy Storage Facility Control Strategy

Peak Shaving

Dynamic VAR Support

Frequency Support

Other

Please submit a detailed description of the control strategy according to the templates in Appendix B. NT Power reserves the right to modify the control strategy as part of its Detailed Technical Connection Assessment.

▶ SECTION J: LOAD DISPLACEMENT/PEAK SHAVING

Please complete the following section if this is a load displacement or peak shaving project

Operating Mode

Parallel

Non-Parallel

Transition Type

Closed *"make before break"*

Open *"break before make"*

Time that generator remains parallel to grid *closed transition only, ms*

For non-parallel load displacement, SCADA monitoring and Gross Load Billing (GLB) may apply. For load displacement generation facilities, please attach a schedule of the forecasted maximum generation output (as a function of loading of the facility). At a minimum, include the forecasted generation output information (i.e. Watts and VARs) during the minimum and maximum of the load facility to which the load displacement generator is connecting (see Appendix C for template)

SECTION K: DER CHARACTERISTICS

For facilities with multiple generators: If your generators have different characteristics, please use the "Add Page" button and provide the characteristics for each generator on the additional pages.

DER type: Synchronous Induction Inverter based Other

Number of Generating Units Rated Capacity of Each Unit kW kVA DER Output Voltage in kV

Manufacturer Type or Model Number

If Power Conversion Type is "Other", please provide values equivalent to a Synchronous or Induction type generator.

Maximum Starting In-rush Current multiple of full load current, pu Generator Winding Connection Delta Star

Neutral Grounding Method for star winding connection only Impedance R in ohms Impedance X in ohms

Limits of range of reactive power at the machine output:

Lagging over-excited, kVAR Lagging Power Factor Leading under-excited, kVAR Leading Power Factor

Limits of range of reactive power at the PCC:

Lagging over-excited, kVAR Lagging Power Factor Leading under-excited, kVAR Leading Power Factor

For synchronous units	For induction units
Nominal Machine Voltage <i>kV (LL)</i> <input type="text"/>	Nominal Machine Voltage <i>kV (LL)</i> <input type="text"/>
Unsaturated Reactance <i>kVA Base</i> <input type="text"/>	Unsaturated Reactance <i>kVA Base</i> <input type="text"/>
Unsaturated Reactance <i>kV Base</i> <input type="text"/>	Unsaturated Reactance <i>kV Base</i> <input type="text"/>
Direct Axis Subtransient Reactance, X_d'' <i>pu</i> <input type="text"/>	Direct Axis Subtransient Reactance, X_d'' <i>pu</i> <input type="text"/>
Direct Axis Transient Reactance, X_d' <i>pu</i> <input type="text"/>	
Direct Axis Synchronous Reactance, X_d <i>pu</i> <input type="text"/>	
Subtransient Time, T_d'' <i>ms</i> <input type="text"/>	
Zero Sequence Reactance, X_0 <i>pu</i> <input type="text"/>	

SECTION L: INTERFACE TRANSFORMER

The transformer connecting to the NT Power distribution system

Transformer Ownership

Customer NT Power

Transformer Rating *KVA*

Transformer Type

Single Phase

Three Phase

Nominal Voltage of High Voltage Winding *kV*

Nominal Voltage of Low Voltage Winding *kV*

Impedance Base (if different than ratings above)

kVA Base

Impedance (R) *pu*

Impedance (X) *pu*

OR

Impedance (Z%) %

High Voltage Winding Connection

Delta

Star

High Voltage Grounding Method *for star winding connection only*

Solid

Ungrounded

Impedance

Star Impedance R *in ohms*

Star Impedance X *in ohms*

Low Voltage Winding Connection

Delta

Star

Low Voltage Grounding Method *for star winding connection only*

Solid

Ungrounded

Impedance

Star Impedance R *in ohms*

Star Impedance X *in ohms*

Notes

The term "High Voltage" refers to the connection voltage to NT Power's distribution system and "Low Voltage" refers to the generation or any other intermediate voltage.

Providing a photo of transformer equipment along with this application may help expedite your application.

SECTION M: INTERMEDIATE TRANSFORMER

Transformer between the interface transformer and DER

Please complete the following section if your project includes an intermediate transformer.

Do you intend to install an intermediate transformer?

Yes No

Transformer Rating *kVA*

Transformer Type

Single Phase Three Phase

Nominal Voltage of High Voltage Winding *kV*

Nominal Voltage of Low Voltage Winding *kV*

Impedance

kVA Base

kV Base

Impedance R *pu*

Impedance X *pu*

High Voltage Winding Connection

Delta Star

High Voltage Grounding Method *for star winding connection only*

Solid Ungrounded Impedance

Star Impedance R *in ohms*

Star Impedance X *in ohms*

Low Voltage Winding Connection

Delta Star

Low Voltage Grounding Method *for star winding connection only*

Solid Ungrounded Impedance

Star Impedance R *in ohms*

Star Impedance X *in ohms*

Notes:

The term "High Voltage" refers to the connection voltage to NT Power's distribution system and "Low Voltage" refers to the generation or any other intermediate voltage.

SECTION N: HIGH-VOLTAGE GROUNDING TRANSFORMER

Please complete the following section if your project includes a high-voltage grounding transformer.

Do you have a high-voltage grounding transformer?

Yes No

Transformer Type *select one*

Zig-Zag Star-Delta

Zero Sequence Impedance (Z0) R *ohms*

Zero Sequence Impedance (Z0) X *ohms*

▶ SECTION O: SUBMISSION CHECKLIST

Please ensure the following items are completed prior to submission. Your application may not be processed if any part is omitted or incomplete:

- Payment in full including applicable taxes (by cheque payable to “Newmarket-Tay Power Distribution Ltd.”)
- Completed Form B stamped by a Professional Engineer
- Signed Study Agreement (original signature is required)
- Single Line Diagram (SLD) of the Generator’s facilities, must be stamped by a Professional Engineer
- Protection Philosophy
- Distribution Operating Map (DOM) and/or Site Plan *(not required for existing load customers that are connecting a load displacement generation, net metering generation or energy storage system behind their existing metered connection point)*
- Load Displacement Generation Facility’s load and generation schedules (if applicable)
- Load Displacement Generation Facility’s mode of operation (if applicable)
- Energy Storage Facility operating strategy description an parameters (if applicable)
- Emergency Backup Generation Facility’s mode of operation (if applicable)

▶ SECTION P: CIA APPLICATION FEE CHECKLIST

Please ensure the following items are completed prior to submission. Your application will not be processed if any part is omitted or incomplete. Check all that apply:

- Applicable CIA Fee**
See Connection Impact Assessment Fees on our website for costs. Please enter the amount from the fee schedule. \$ +HST
- Transmission Customer Impact Assessment (TxCIA) Fee (if applicable)**
A TxCIA is also required if the total nameplate generation of the project is greater than 10MW. \$ +HST
- IESO System Impact Assessment (SIA) Fee (if applicable)**
An SIA deposit is required if the total nameplate generation of the project is greater than 10MW. The total cost of the SIA will be Trued Up/Down upon the receipt of the SIA from the IESO. See the [IESO’s SIA Application](#) for costs. \$

SECTION Q: ATTACHMENTS

Attached Documents / Drawings

Item #	Description	Document #	# of Pages

SECTION R: NOTES

▶ **SECTION S: NT POWER SPECIFIC REQUIRED FIELDS**

No further information is required at this time.

▶ **SECTION T: NT POWER SPECIFIC ADDITIONAL NOTES**

Section A: no additional notes

Section B: no additional notes

Section C: no additional notes

Section D: no additional notes

Section E: no additional notes

Section F: no additional notes

Section G: no additional notes

Section H: no additional notes

Section I: no additional notes

Section J: no additional notes

Section K: no additional notes

Section L: At the Generator's expense, and if requested, NT Power may provide transformation up to a maximum of 500 kVA three-phase, as described in the NT Power Conditions of Service.

Section M: no additional notes

Section N: no additional notes

Section O: for new DER site, Distribution Operating Map (DOM) is required by NT Power in addition to Site Plan

Section P: When there is an upstream LDC, an additional \$10,000+HST will be required for costs associated with this LDC's CIA.

Section Q: no additional notes

Section R: no additional notes

Section S: - For question: "What is the barcode of the nearest pole serving the project location?", this is only applicable if you choose "No" to question: "Is there an existing NT Power account at the project location?" in Section D

- For question: "NT Power Account Number (if transformer is owned by NT Power)", this is only applicable if you answer "NT Power" to question: "Transformer Ownership" in Section L.

▶ APPENDIX A - FIGURES & DIAGRAMS

Figure A1: Where There is No New NT Power Owned Line Expansion

*PCC: the point where the customer facility connects to the LDC owned system

**PODC: the point where the DER unit(s)'s interconnection system connects the DER unit(s) to the DER facility.
